# GM Small Block Engine Cylinder-Head Gaskets

## Generation III / IV / V

As an automotive supplier, ElringKlinger has become a trusted partner to its customers – with a firm commitment to shaping the future of mobility. We recently celebrated 140 years of engine gasket excellence in 2019. Our efforts to excel are supported by a dedicated global workforce of around 10,000 employees at 44 ElringKlinger locations worldwide.

One important milestone for our continuing success was reached in the mid '90s. At that time, GM awarded ElringKlinger the series contract for small block LS Engine cylinder head-gaskets.

Our success with GM is centered on a deep knowledge of multilayer steel head gasket technology, a new production location in Buford, Georgia and long-standing inter-company cooperation since 1924. That's when the first series cylinder-head gasket production for GM subsidiary Opel, located in Germany, was established between the two companies.

From the release of the Generation III engine in 1997, through Generation IV, and all the way until today's Generation V, ElringKlinger has been GM's only supplier for multilayer steel head gaskets for the small block engine family.

Over the years, there were challenges to overcome.

The first-Generation III cylinder-head gasket needed to be developed to cope with engine blocks cast in aluminum and iron combined, due to the differences in surface roughness. In addition, the former five-bolt pentagonal cylinder-head pattern was replaced with a square, four-bolt design. Specially designed beads on both functional layers in combination with a thin laser welded stopper on the carrier layer sealed the engine perfectly. This initial design performed well again, when some Generation IV engines were equipped with Displacement on Demand, which puts extra stress on the cylinder-head gasket due to increased sealing gap oscillations.

Another challenge encountered was the sealing of the LS7 Generation IV engine, which produces up to 513 HP. Due to the increased bore and reduced land width between the cylinders, a specially designed bead was created, and welded stoppers were placed on the functional layers. This cylinder-head gasket also seals the LS7427/570 crate motor, producing a stunning 570 Hp.

The Generation V presented new challenges. The most remarkable was the lack of five cylinder-head bolts on the intake side, making the sealing of the so called "backland" difficult. This was realized by a specially designed half bead in combination with a 5-layer concept. Some engines use an 'Active Fuel Management' system, meaning that they alternate between V4 & V8 modes. Others like the L87 engine, use a 'Dynamic Fuel Management' system. Both can lead to certain stresses on the cylinder-head gasket, as the shutdown of cylinders could be seen as a kind of cold start to the engine. In addition, the sealing gap oscillations are unevenly distributed. The 5-layer cylinder-head gasket proved to be the best solution, due to the achieved increase in fuel economy. Some cylinder-head gaskets are also fitted with a red silicon screen print for higher heat resistance.

These details are just a few of the technical highlights that can be found within the GM small block engine gasket range. Elring – Das Original, the aftermarket brand of ElringKlinger, is distributor for these outstanding examples of precision German engineering.
